

Non-Toxic Concentrated Bitter Solution

What is Avert?

AVERT is an extremely bitter solution for application to bandages or dressings or around open wounds. It is used to discourage pets from chewing, licking and biting wounds, bandages, stitches and household objects.

How does Avert work?

AVERT contains a high concentration of the bitterant denatonium benzoate together with bitter plant principles and oils. The extremely unpleasant and bitter nature of AVERT will discourage most animals from attempting to lick surfaces treated with the product. The alcoholic base ensures fast evaporation from bandages and dressings, leaving them dry but impregnated with the active principles.

How do you use Avert?

Apply AVERT by spraying onto the surface to be protected. Re-apply as soon as the animal starts the undesired licking or biting behaviour again.

How often should you use Avert?

Can be applied as many times as necessary. The product is non-toxic and safe to use

Precaution(s)

- Because it contains a high percentage of alcohol, the product is inflammable and appropriate care should therefore be taken when storing and using it.
- AVERT does not normally stain furniture, carpets etc, but as a precaution users should apply the product to a small inconspicuous test area before use.
- Do not use AVERT on soft furnishings. Read the product carton instructions carefully before use.

Composition

AVERT contains a high concentration of the bitterant denatonium benzoate together with bitter plant principles and oils. Active ingredients are 4% denatonium benzoate, together with bitter orange oil and eucalyptus oil.

Pack size(s)

100ml

Storage

Store in a cool place (below 25°C) away from direct sunlight

The alcoholic base ensures fast evaporation from bandages and dressings, leaving them dry but impregnated with the extremely bitter solution, which should discourage most animals from attempting to lick or chew the treated area.
