

Ear Cleanser

What is **CleanEar**?

CLEANEAR is a non-medicated, gentle, ear cleaning solution for dogs & cats.

How does **CleanEar** work?

CLEANEAR is an aqueous solution of organic acids which gently lowers the pH of the ear. This helps to separate dead tissue from the healthy tissue, and also discourages growth of bacteria, fungi and yeasts. CLEANEAR also contains ingredients to help dry out the ear tissues and to dissolve and remove wax and other secretions.

How do you use **CleanEar**?

- Hold the dog or cat's head to the side and instil 5 to 10 drops twice daily in the affected ear(s).
- Massage gently to assist with the break-up of debris.
- Use a cotton swab to remove all excess wax and debris.

How often should you use **CleanEar**?

There is no limit to the frequency with which you can use CLEANEAR. Use regularly when indicated:

- for use after swimming in dogs prone to ear problems;
- as an aid in re-establishing the ear's microclimate and normal flora after illness and treatment;
- for the removal of debris in ears in cases of ear-mite infestations to allow better penetration of miticidal preparations; and
- for the removal of crusts, excess wax, exudate and other debris from the canine and feline ear.

Pack size(s)

30ml, 100ml dropper bottles

Storage

Store at room temperature

Ear infections can be caused by a number of things — a foreign object could be lodged in the ear (e.g. twig, grass, etc), the dog or cat could have an allergy to something in its diet or environment or there could be hair growth deep in the ear canal.
